

GitHub Copilot SDK & Agent Merge: Agentic Developer Workflows – TOC

Level – Intermediate | Format - Guided Lab, Self Paced | Duration - 4 Hours (4 Modules x 60 min)

Contents

Module 1: Copilot SDK Foundations - Python (60 min)	1
Module 2: Multi-Language SDK & /security-review Skill - Node.js (60 min)	2
Module 3: Copilot CLI: TUI, Voice & /every Scheduling (60 min)	3
Module 4: Agent Merge Configuration & Audit (60 min)	4

Course Overview

This Guided Lab provides practical, hands-on guidance for GitHub Copilot SDK & Agent Merge: Agentic Developer Workflows. Participants work through four key scenarios covering agentic developer workflows across languages and interfaces — from SDK foundations to CLI-driven and scheduled agent execution, through to merge governance and audit. The course focuses on real-world implementation using GitHub, Studio, Foundry and is structured for customer-ready delivery.

- **Technology stack:** GitHub Copilot Business, GitHub Copilot SDK, GitHub Actions, GitHub Enterprise Cloud
- **What's new:** Built on Build 2026 — Copilot SDK GA (6 languages), Agent Merge, Copilot CLI TUI redesign, and /every scheduling

Module 1: Copilot SDK Foundations - Python (60 min)

- Set up the GitHub Copilot SDK (GA) in a Python project
- Build a first agentic developer workflow against GitHub Copilot Business
- Understand core SDK concepts that carry across all supported languages

Module 2: Multi-Language SDK & /security-review Skill - Node.js (60 min)

- Port the Module 1 workflow to the Copilot SDK for Node.js
- Enable and run the /security-review skill against a codebase
- Compare SDK behavior and output across the two languages

Module 3: Copilot CLI: TUI, Voice & /every Scheduling (60 min)

- Navigate the redesigned Copilot CLI text-based UI (TUI)
- Drive the CLI with voice input for common developer tasks
- Schedule a recurring agent run with /every, backed by GitHub Actions

Module 4: Agent Merge Configuration & Audit (60 min)

- Configure Agent Merge for multi-agent pull request workflows
- Review merge decisions and enforce governance policy in GitHub Enterprise Cloud
- Audit agent-driven changes for compliance before release

Outcome

You build agentic developer workflows with the GitHub Copilot SDK across languages, drive them from the redesigned Copilot CLI, and configure Agent Merge governance and audit — ready for customer-facing, production developer environments.
